The Pelton wheel flowmeter is a flow measurement device based on the Pelton wheel principle. It is suitable for measuring small flows of non-viscous liquids and can be used in high-pressure applications. The Pelton wheel flowmeter uses the blades of the wheel driven by the flow of liquid. The fluid enters the flowmeter under high pressure conditions, and the kinetic energy of the fluid causes the wheel to rotate. The rotation speed of the wheel is proportional to the flow rate, and by measuring the rotation speed of the wheel, the flow rate of the fluid can be calculated.
