The global Pelvic Floor Electromyography Biofeedback market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A myoelectric biofeedback instrument is a specialized device used to measure and transmit information about the electrical activity of muscles in the human body. This type of instrument typically consists of electrodes that are attached to the skin near the muscle being measured. The electrodes detect the electrical signals generated by muscle contraction, which are then amplified and transmitted to a computer or other recording device for analysis.
