## Abstracts

The global Pelvic Floor Muscle Strengthening Chair market size is expected to reach \$ 147 million by 2032, rising at a market growth of 3.8% CAGR during the forecast period (2026-2032).

In 2025, global pelvic floor muscle strengthening chair production reached approximately 15,200 units. Pelvic Floor Muscle Strengthening Chair is a non-invasive device designed for pelvic floor muscle training and rehabilitation. It primarily uses technologies such as high-intensity focused electromagnetic stimulation, magnetic wave stimulation, or bioelectrical stimulation to induce passive contractions of the pelvic floor muscles, thereby strengthening muscles, improving pelvic floor function, and supporting rehabilitation. The device is typically designed in a chair-style structure, allowing users to complete treatment sessions simply by sitting on the chair without the need for undressing or invasive procedures. As a result, it is widely used in medical aesthetics institutions, rehabilitation centers, obstetrics and gynecology departments, urology clinics, and health management centers.

The pelvic floor muscle strengthening chair is mainly applied in postpartum pelvic floor rehabilitation, urinary incontinence improvement, recovery from pelvic floor muscle relaxation, and pelvic core muscle training. It can also help alleviate symptoms such as frequent urination, urine leakage, and reduced quality of life caused by weakened pelvic floor muscles. With the growing popularity of non-invasive rehabilitation concepts and increasing demand for women's health management, pelvic floor muscle strengthening chairs are gradually developing toward intelligent operation, multi-mode stimulation, precise parameter adjustment, and enhanced user comfort.

The pelvic floor muscle strengthening chair market has experienced continuous growth

in recent years, driven by increasing awareness of women's health management, rising demand for postpartum rehabilitation, and the growing adoption of non-invasive rehabilitation technologies. As an important device in the field of pelvic floor rehabilitation and functional improvement, it is widely used in obstetrics and gynecology departments, rehabilitation centers, medical aesthetics institutions, urology clinics, and high-end health management settings. The device is mainly applied in postpartum pelvic floor recovery, urinary incontinence improvement, pelvic floor muscle relaxation rehabilitation, and core muscle training programs. With consumers placing greater emphasis on treatment comfort, privacy protection, and non-invasive care experiences, market demand for features such as high-intensity focused electromagnetic stimulation, multi-mode stimulation, intelligent parameter adjustment, and personalized training programs continues to increase. At the same time, medical rehabilitation institutions are promoting the upgrade of such equipment toward intelligent, digitalized, precise, and multifunctional integration in order to enhance service specialization and differentiation. In the future, driven by the upgrading of women's health consumption, the growth of the aging population, and the wider adoption of pelvic floor rehabilitation concepts, the pelvic floor muscle strengthening chair market is expected to maintain strong growth potential. However, industry competition will increasingly focus on treatment effectiveness, safety, equipment stability, operational convenience, and brand service capabilities.
