## Abstracts

According to our (Global Info Research) latest study, the global PEM Electrolyser Test System market size was valued at US\$ 888 million in 2024 and is forecast to a readjusted size of USD 1470 million by 2031 with a CAGR of 7.4% during review period.

The PEM electrolyzer test system is a device specially designed to evaluate and monitor the performance of proton exchange membrane (PEM) electrolyzers. The system analyzes the efficiency, stability and durability of the electrolyzer by accurately measuring and controlling its operating parameters such as voltage, current, temperature, pressure and the amount of hydrogen produced. It supports researchers and technicians in the development, optimization and practical application of PEM electrolysis technology to ensure that the electrolyzer can operate under optimal conditions and help identify potential problems or room for improvement. The PEM electrolyzer test system is crucial to promoting the development of green hydrogen production technology and is widely used in scientific research institutions and industrial laboratories.
