PEN (Polyethylene Naphthalate) films are high - performance polyester films. They are mainly produced through a polycondensation reaction between 2,6 - naphthalenedicarboxylic acid (NDA) or dimethyl 2,6 - naphthalenedicarboxylate (DMN) and ethylene glycol (EG). The characteristic of its chemical structure is that the molecular chain contains a naphthalene ring structure. This is different from the common PET (Polyethylene Terephthalate) films, where the molecular chain has a benzene ring structure. The naphthalene ring structure endows PEN films with higher strength, rigidity, and thermal stability.
