Abstracts

According to our (Global Info Research) latest study, the global Pencil Beam DEXA Bone Densitometer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The main consumer markets of the Pencil Beam DEXA Bone Densitometer are North America and Asia. With the gradual recovery of the global economy after the COVID-19 outbreak and the return of major economies to normal, the medical industry will see certain growth. More and more hospitals and clinics are able to carry out imaging tests. As a result, the demand for Pencil Beam DEXA Bone Densitometer will increase in the foreseeable future.

The Pencil Beam DEXA Bone Densitometer is a type of bone densitometry system that uses a pencil-thin beam of X-rays to measure bone mineral density. This technology is similar to conventional DEXA, but instead of using a fan-shaped beam, it uses a thin, linear beam that scans across the bone being assessed. Pencil Beam DEXA systems are generally more accurate in measuring bone mineral density than conventional DEXA systems, particularly in patients who have a higher degree of obesity or who have significant scoliosis or other spinal deformities. They are also better able to detect small changes in bone mineral density over time, which can be useful for monitoring the effectiveness of treatments for osteoporosis and related conditions. However, Pencil Beam DEXA systems are generally more expensive and less widely available than conventional DEXA systems, which may limit their use in some clinical settings.
