## Abstracts

The global Pendant Crane Switches market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Trends in the pendant control station market include continued advances in automation and digitalization technologies, as well as the need for more efficient and safer operations. As the level of industrial automation increases, the design and functionality of pendant control stations are also constantly innovating. In addition, the demand for smarter and more convenient control station equipment is also increasing. With the promotion of Industry 4.0, the pendant control station market may develop in a more intelligent and interconnected direction.

Pendant crane switches are a series of simple switches that control much larger electrical loads through various means. This causes the machine to move to and from the desired point. A pendant switch hangs down from the hoist or off of a separate festoon track and allows the operator to control the crane and the load as it moves down the runway. A handheld controller with push buttons is directly wired into the hoist or a separate festoon track and hangs down to be used by the operator.
