Abstracts

The global Pendant Hydride Silicone Fluid market size is expected to reach $ 602 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of Pendant Hydride Silicone Fluid was approximately 135,000 tons, with an average manufacturer-level selling price of around USD 3.0 per kilogram. Gross margins of major manufacturers were generally around 25%–30%.

Pendant Hydride Silicone Fluid is a functional silicone fluid containing reactive Si–H bonds as pendant groups along the polysiloxane chain. Typical products include polymethylhydrosiloxane (PMHS) and copolymeric silicone fluids containing methylhydrosiloxane units. Its key characteristic is that the Si–H bonds are attached to silicon atoms within the siloxane backbone as pendant groups, providing high chemical reactivity. These Si–H groups can undergo hydrosilylation reactions with vinyl, allyl, and other carbon–carbon double bond-containing compounds, and can also participate in crosslinking, grafting, and surface modification reactions. The products are typically colorless, transparent or translucent liquids. Their hydrogen content, viscosity, and reactivity can be controlled by adjusting the proportion of methylhydrosiloxane units, degree of polymerization, and molecular structure. Pendant Hydride Silicone Fluid is an important crosslinking and functional modification raw material for addition-cure silicone systems.

The upstream industry of Pendant Hydride Silicone Fluid mainly includes methylhydrodichlorosilane, dimethyldichlorosilane and their hydrolysis-derived cyclic siloxanes, end-blocking agents, catalysts, and other basic organosilicon raw materials. Major production processes include monomer hydrolysis, cyclic siloxane preparation,

equilibration polymerization, end-blocking, and purification. Downstream products mainly include addition-cure liquid silicone rubber, silicone gel, silicone release materials, silicone pressure-sensitive adhesives, silicone foam, and functional modified silicone fluids. Pendant Hydride Silicone Fluid is also used for hydrophobic and surface modification of textiles, glass, powders, and other materials.
