According to our (Global Info Research) latest study, the global Penicillin Industrial Salt market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Penicillin refers to a class of antibiotics containing penicillin in the molecule that can destroy the cell wall of bacteria and play a bactericidal role during the reproduction period of bacterial cells. Penicillin industrial salt is also called penicillin G potassium. The raw material is mainly corn. It can be used as raw material for all penicillin antibiotics and some cephalosporin antibiotics. It can be used to synthesize intermediates such as 6-APA and 7-ADCA or directly synthesize penicillin potassium, penicillin sodium and carat Potassium Vitamin Acid etc. The product has high purity and good color, the aqueous solution is clear and transparent, the color grade is 0.6, the absorbance value (400) is below 0.3, and the product has a high grade rate of 100%. After five years of storage, the quality of the product is basically unchanged. Penicillin industrial salt is a good medicine for chronic superficial gastritis, rheumatoid arthritis and other diseases, with high curative effect and low toxicity. Penicillin is the first anti-infective drug used clinically in the world. For a long time, penicillin has been prosperous in the antibiotic market and has become the first-line antibacterial drug widely used in the world.
