## Abstracts

The global Pentaerythritol Phosphate (PEPA) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Pentaerythritol Phosphate (PEPA) is a white powder, a reactive phosphorus-based intumescent flame retardant. PEPA has a hydroxyl group at the end, so it is an intermediate for the manufacture of a series of halogen-free phosphorus-containing flame retardants. It can be directly applied to the flame retardancy of plastics such as polypropylene and PBT. The advantage of the terminal hydroxyl group makes it also suitable for flame-retardant plastics. Adhesives and coatings. PEPA has good flame retardant effect and is non-toxic. It is suitable for industries such as electronic appliances and can also be used as a component of mixed intumescent flame retardants.
