Abstracts

According to our (Global Info Research) latest study, the global Pentanedioic Acid market size was valued at US\$ 1152 million in 2025 and is forecast to a readjusted size of US\$ 1697 million by 2032 with a CAGR of 5.7% during review period.

In 2025, global Pentanedioic Acid output reached about 700,000 tons and global capacity of around 800,000 tons. The average price is about USD 1,600 per ton, with gross margins near 25%. Pentanedioic Acid is a five-carbon aliphatic dicarboxylic acid ($\text{HOOC}-(\text{CH}_2)_3-\text{COOH}$) used as an intermediate in the production of engineering plastics, polyester polyols, alkyd resins, plasticizers, adhesives, lubricants, corrosion inhibitors, pharmaceuticals, agrochemicals, and specialty chemicals. It is valued for its bifunctional carboxyl groups, which enable polymerization, esterification, and other organic synthesis reactions. Industrial production is primarily based on the oxidation of cyclopentanone or cyclopentanol, oxidation of cyclic hydrocarbons, or catalytic oxidation of bio-based feedstocks, while emerging bio-fermentation routes are being developed to improve sustainability. The supply chain begins with upstream petrochemical or renewable raw materials such as benzene, cyclopentane, or biomass-derived carbohydrates, followed by chemical synthesis, purification, crystallization, and quality control to produce industrial-, pharmaceutical-, or high-purity grades. The finished pentanedioic acid is then supplied to downstream manufacturers serving the polymer, coatings, lubricants, pharmaceutical, agricultural chemical, and specialty chemical industries through direct sales, distributors, and global chemical supply networks.
