Abstracts

The global Pentavalent Vaccine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A pentavalent vaccine is a five-in-one vaccine that protects against diphtheria, tetanus, and whooping cough, hepatitis B, and Haemophilus influenza type b with just one dosage. One of the most well-known and successful techniques of preventing paediatric diseases is vaccination. The Government of India has achieved tremendous progress in preventing and controlling vaccine-preventable diseases since implementing the Universal Immunization Programme (UIP) (VPDs). The introduction of a pentavalent vaccination will help to minimise the number of cases of pneumonia and meningitis caused by the germs Haemophilus influenzae type b (Hib).
