Abstracts

The global Pentylmagnesium Bromide market size is expected to reach \$ 140 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Pentylmagnesium Bromide is a Grignard reagent consisting of a pentyl alkyl group bonded to magnesium bromide, typically supplied as a solution in ethyl ether or tetrahydrofuran (THF). It is a highly reactive organometallic intermediate widely used in pharmaceutical synthesis, agrochemical production, specialty chemical manufacturing, flavors and fragrances, and advanced organic synthesis for carbon-carbon bond formation through nucleophilic addition reactions. The supply chain begins with upstream raw materials including 1-bromopentane (or pentyl bromide), magnesium metal, and anhydrous ether solvents such as THF or diethyl ether. In the manufacturing stage, pentyl bromide reacts with activated magnesium under strictly moisture-free and oxygen-free conditions to produce pentylmagnesium bromide solution. Midstream activities involve purification, concentration adjustment, quality control, and packaging in sealed inert-gas containers designed for air-sensitive materials. Downstream users include pharmaceutical companies, agrochemical producers, contract research organizations (CROs), fine chemical manufacturers, academic laboratories, and specialty chemical companies that utilize the reagent as a key building block for synthesizing complex organic molecules, active pharmaceutical ingredients (APIs), crop protection compounds, and high-value specialty chemicals. In 2025, global Pentylmagnesium Bromide output was about 16,000 tons with 20,000 tons of capacity, average prices of USD 5,000-13,000 per ton, and gross margins around 28%.
