The global People Counting & Tracking Sensors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A People Counting & Tracking Sensors is a device used to monitor and record the number of people. It is usually based on different technical principles such as infrared sensing, camera image analysis, pressure sensing, ultrasonic, etc., to detect and count the number of people passing through a specific area in real time or offline. These sensors can be installed in public places such as entrances and exits, corridors, conference rooms, stores, etc. for applications such as people flow monitoring, security management, resource planning, etc. The sensors sense the presence of people, the number of times they move or pass through a specific area, and transmit the data to the relevant systems for analysis and recording. People counting sensors play an important role in areas such as people counting, people location, and indoor navigation.
