The global People Fow Statistics System market size is expected to reach \$ 1378 million by 2032, rising at a market growth of 6.9% CAGR during the forecast period (2026-2032).

People flow statistics systems are technological systems that collect and analyze people flow data in real time through sensors, cameras, or intelligent algorithms. They aim to transform the 'flow of people' in physical spaces into quantifiable and analyzable data assets, providing decision support for business operations and public management. Due to the complexity of the technology, application scenarios, and market competition, the industry's gross profit margins show significant differentiation. The overall industry average gross profit margin is approximately 40%-60%, while leading companies can exceed 80% through technological monopolies or deep cultivation of specific application scenarios.
