According to our (Global Info Research) latest study, the global Peptide Nucleic Acid market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

PNA can be used as a specific probe for DNA and RNA for genomics and proteomics research. PNA probes have high specificity and affinity and can accurately detect specific DNA or RNA sequences, so they have broad application prospects in the fields of genetic diagnosis, gene therapy, and gene expression regulation. PNA can also be used as a drug molecule to treat certain diseases. For example, PNA can bind to specific mRNA sequences, thereby preventing its translation into proteins, thereby achieving the purpose of treating diseases. In addition, PNA can also be used as antisense nucleic acid drugs to treat certain genetic diseases and cancers.
