Abstracts

The global Perbenzoic Acid market size is expected to reach \$ 273 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Perbenzoic acid is an organic peracid formed by the reaction of benzoic acid or benzoyl chloride with hydrogen peroxide, and it is primarily used as a strong oxidizing agent in organic synthesis, especially for epoxidation of alkenes and Baeyer-Villiger oxidations in fine chemicals and pharmaceutical intermediates. Its supply chain is relatively niche and specialty-oriented: upstream begins with petrochemical-derived benzene (converted to benzoic acid via oxidation of toluene) and hydrogen peroxide (produced via the anthraquinone process), along with acid catalysts; midstream involves controlled peroxidation reactions under low-temperature, stabilized conditions due to the compound's thermal instability and sensitivity, typically handled by specialty chemical manufacturers and custom synthesis firms rather than bulk producers; downstream, perbenzoic acid is supplied in dilute or stabilized forms to pharmaceutical companies, agrochemical producers, and fine chemical labs, where it is used in small-batch, high-value synthesis, with logistics requiring strict safety protocols (cold storage, controlled transport) due to its reactive and potentially explosive nature. In 2025, global Perbenzoic Acid output was about 110,000 tons with 150,000 tons of capacity, average prices of USD 1,500-2,500 per ton, and gross margins around 23%.
