According to our (Global Info Research) latest study, the global Percussion Expectorator Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The working principle of the percussion type expectorant machine is vibration and expectoration. According to the principle of clinical chest physical low-frequency oscillation therapy, the therapeutic force that changes periodically in a specific direction is generated from the vertical and horizontal directions. The vertical force on the body surface makes the mucus on the surface of the bronchial mucosa And metabolites become smaller and looser, and the horizontal force on the body surface can help mucus flow selectively to the large bronchi, thereby promoting the smoothness of the respiratory tract and the discharge of sputum.
