Abstracts

The global Percussion Expectorator Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The working principle of the percussion type expectorant machine is vibration and expectoration. According to the principle of clinical chest physical low-frequency oscillation therapy, the therapeutic force that changes periodically in a specific direction is generated from the vertical and horizontal directions. The vertical force on the body surface makes the mucus on the surface of the bronchial mucosa and metabolites become smaller and looser, and the horizontal force on the body surface can help mucus flow selectively to the large bronchi, thereby promoting the smoothness of the respiratory tract and the discharge of sputum.

This report studies the global Percussion Expectorator Machine production, demand, key manufacturers, and key regions.
