According to our (Global Info Research) latest study, the global Percutaneous Transluminal Coronary Rotational Atherectomy (PTCRA) market size was valued at US\$ 87.71 million in 2025 and is forecast to a readjusted size of US\$ 139 million by 2032 with a CAGR of 6.8% during review period.

Percutaneous Transluminal Coronary Rotational Atherectomy (PTCRA) is an interventional procedure used to treat stenotic or calcified lesions in the coronary arteries. PTCRA employs a high-speed rotating burr, typically diamond-coated, that is delivered percutaneously through a catheter into the coronary artery. The rotating burr grinds down the calcified or hardened plaque, restoring normal blood flow. This technique is primarily used in cases where standard coronary interventions, such as balloon angioplasty or stent placement, are ineffective, especially in heavily calcified lesions.
