Abstracts

The global Perfluorodecalin market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Perfluorodecalin is a colorless transparent liquid, CAS number: 306-94-5, density 1.929g/mL, melting point -10°C, acute toxicity, and may be harmful to the environment. Perfluorodecalin can be used as a blood substitute and is often used in retinal and vitreous surgery; it can be used as a skin conditioning agent in cosmetics and personal care products because of its ability to dissolve and transmit oxygen to the skin. Perfluorodecalin is packaged in a sealed brown reagent bottle to avoid contact with oxides, and stored in a cool, dry place with ventilation. The packaging specifications are generally 5g, 25g, 100g, 500g, etc., and can also be packaged according to user needs. Perfluorodecalin is a fluorinated solvent commonly used as the main component of fluorinated biphasic systems (FBS) or fluorinated multiphase systems (FMS) in synthetic chemistry. It is also used as an additive to increase oxygen solubility in fermentation media.

This report studies the global Perfluorodecalin production, demand, key manufacturers, and key regions.
