According to our (Global Info Research) latest study, the global Perfluorooctane Sulfonate (PFOS) Testing Services market size was valued at US\$ 2014 million in 2025 and is forecast to a readjusted size of US\$ 2972 million by 2032 with a CAGR of 5.7% during review period.

To address the challenges of insufficient sensitivity, complex pretreatment processes, and difficulty in accurately quantifying trace amounts using traditional detection methods, perfluorooctane sulfonate (PFOS) testing services have emerged. Since the international community included persistent organic pollutants in its control lists and high-resolution mass spectrometry (HPLC) technology has been widely applied, the field of monitoring organic pollutants in the environment and consumer products has developed significantly. Currently, PFOS testing services have evolved into a comprehensive system encompassing various methods, including liquid chromatography-tandem mass spectrometry (LC-MS/MS), high-performance liquid chromatography (HPLC), rapid screening kits, and isotope dilution quantification. These services are widely used in environmental monitoring, industrial product compliance evaluation, textiles and leather, fire-fighting foams, and food contact materials, enabling precise risk identification, ensuring regulatory compliance, and safeguarding ecological and environmental safety.
