According to our (Global Info Research) latest study, the global Perfluoropolyether(PFPE) Fluorinert Electronic Liquids market size was valued at US\$ 653 million in 2024 and is forecast to a readjusted size of USD 1001 million by 2031 with a CAGR of 6.3% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Perfluoropolyethers (PFPEs) are long-chain polymers composed of three elements: carbon, oxygen and fluorine, with a unique chemical structure and excellent physicochemical properties. Its molecule mainly contains C-F bond, which gives PFPE very high chemical inertness, thermal oxidative stability, flame retardancy and radiation resistance. The anionic catalytic polymerization method using hexafluoropropylene oxide as raw material is one of the more researched methods, which makes the product polymerization degree different due to the different catalyst systems and reaction conditions. These researches not only promote the optimization of the performance of PFPE materials, but also provide theoretical basis and technical support to further enhance their environmental stability and recyclability.
