## Abstracts

The global Perfluorosulfonic Acid Ion Exchange Membrane market size is expected to reach \$ 979 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

Ion-exchange membranes transport dissolved ions across a conductive polymeric membrane. The membranes are often used in desalination and chemical recovery applications, moving ions from one solution to another with little passage of water.

Ion-exchange membranes are made of a polymeric material attached to charged ion groups. Anion-exchange membranes contain fixed cationic groups with predominantly mobile anions; because anions are the majority species, most of the conductivity is due to anion transport. Cation-exchange membranes contain fixed anionic groups with predominantly mobile cations; because cations are the majority species, most of the conductivity is due to cation transport.

The permselectivity of ion-exchange membranes describes their charge selectivity. This charge selectivity reflects the membrane's ability to discriminate between ions of opposite charge. A higher selectivity leads to increased recovery and performance of the membrane.

Global ion exchange membrane key players include Chemours, Asahi Kasei, etc. Global top 1 manufacturer hold a share over 42%.

Asia-Pacific is the largest market, with a share over 60%, followed by North America and Europe, both have a share about 35 percent.
