According to our (Global Info Research) latest study, the global Perfluorosulfonic Acid Resin Chlor-alkali Membrane market size was valued at US\$ 927 million in 2024 and is forecast to a readjusted size of USD 1331 million by 2031 with a CAGR of 5.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Perfluorosulfonic acid resin chlor-alkali membrane is a special cation selective permeable membrane, mainly composed of perfluorosulfonic acid resin, which has an ordered three-phase microstructure. Its fluorocarbon main chain forms a hydrophobic main body, ensuring the stability of the resin structure; while the sulfonic acid group forms a hydrophilic ion cluster, which is connected by channels, so that ions and water molecules can be transferred through these channels. This structure makes the perfluorosulfonic acid resin chlor-alkali membrane have excellent ion selective permeability.
