According to our (Global Info Research) latest study, the global Perforated Fiberglass market size was valued at US\$ 447 million in 2025 and is forecast to a readjusted size of US\$ 1166 million by 2032 with a CAGR of 14.6% during review period.

average global market price of about USD 2.8 per square meter. The gross margin of major manufacturers in the industry was generally in the range of 20%-35%.

Perforated Fiberglass refers to a type of functional material made from fiberglass mat, fiberglass fabric, or fiberglass reinforced plastic panels as the base material, with regular hole structures formed through mechanical perforation, laser perforation, or other perforating processes. The product combines the high-temperature resistance, corrosion resistance, dimensional stability, flame retardancy, and reinforcement performance of fiberglass, while its perforated structure further improves air permeability, exhaust performance, sound absorption, bonding performance, resin impregnation, and weight reduction.

The upstream supply chain mainly includes fiberglass yarn, fiberglass mat, fiberglass fabric, resin, coating materials, aluminum foil, PVC, silicone, and perforating equipment. The midstream segment involves fiberglass substrate weaving, mat forming, coating and lamination, perforation processing, and panel forming. Downstream applications include building insulation and decoration, electronic insulation and heat protection, noise and heat insulation for transportation vehicles, composite materials for consumer products, filtration support for environmental protection, and other industrial composite material scenarios.
