Perfume alcohol, also known as perfumer's alcohol, is a high-proof ethyl alcohol used as a solvent and carrier in the production of perfumes and fragrances. It serves to dissolve and blend the essential oils and aromatic compounds, allowing the fragrance to be evenly dispersed and enhancing its longevity when applied to the skin. Typically, perfume alcohol is denatured to make it unfit for consumption. Its high volatility helps in the quick evaporation of the solvent, leaving the fragrance to linger on the skin. This alcohol is a crucial ingredient in the fragrance industry for creating a wide variety of scented products.
