According to our (Global Info Research) latest study, the global Peripheral Guidewire market size was valued at US\$ 1164 million in 2025 and is forecast to a readjusted size of US\$ 1816 million by 2032 with a CAGR of 6.6% during review period.

Peripheral Guidewires are used during percutaneous transluminal angioplasty (PTA) for guiding stents or balloon catheters to the site of blockage in the peripheral vasculature. The Peripheral Guidewires Market is segmented into Hydrophilic Peripheral Guidewires and Non-Hydrophilic Peripheral Guidewires.

Peripheral guidewires have multiple layers which includes central core, distal tip and outer coating. Central core is generally made up of stainless steel or Nitinol which possesses superior torque characteristics. Distal tip has variable length and it is made up of radio-opaque material e.g. platinum or iridium alloys and provides flexibility during operations. Peripheral guidewires are coated with a polymer, such as silicone or polytetrafluoroethylene (PTFE), to increase lubricity. Peripheral guidewires are used during the percutaneous transluminal angioplasty and angiography for guiding the stents or catheters to the site of action in the peripheral vasculature. Peripheral guidewire market is mainly driven by increasing demand for minimally invasive surgeries. Other important factor that propels the market growth is increasing worldwide geriatric population. Moreover, growing incidences of neurological, cardiovascular and urology disorders also fuel the market growth. It is important for patients to fully understand the risks of the procedure undergoing laparoscopy and other cardiovascular, neurovascular surgeries. Some risk factors associated with of minimally invasive surgery and preference given to open surgery may hamper the growth of this market.
