Peripheral scoring drug-eluting balloon dilation catheter is a medical device used to treat peripheral artery disease (PAD). This catheter combines the features of a scoring balloon and a drug-coated balloon. Its primary function is to dilate narrowed or blocked arteries by inflating the balloon within the artery. The scoring feature helps reduce elastic recoil and enhances the support, while the drug coating releases localized medication, such as antiproliferative agents, to reduce the risk of restenosis (re-narrowing of the artery).
