According to our (Global Info Research) latest study, the global Peristaltic Pump High Pressure Syringe market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The most important structural feature of the peristaltic pump high-pressure syringe is that there is no syringe to contain contrast media and physiological saline. The liquid driving method of the peristaltic pump high-pressure syringe is completely different from that of the syringe high-pressure syringe. The peristaltic pump injection method applies driving force outside the pipeline to push the physiological saline or contrast agent in the pipeline to achieve the injection action. The peristaltic pump consists of a drive motor, a pump tube and a pump head. The injection liquid flows in an isolated pump tube. It has the characteristics of quick replacement, controllable operation, and low maintenance costs.
