Abstracts

The global Permanent Magnet AC Servo Motor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A permanent magnet AC servo motor is an AC motor that uses permanent magnets as the rotor magnetic field for high-performance precision motion control. Compared with traditional induction AC motors, permanent magnet AC servo motors have higher power density, faster dynamic response and higher efficiency. The rotor of the permanent magnet AC servo motor is equipped with a permanent magnet, which can generate a strong magnetic field and generate electromagnetic coupling with the winding on the stator. By controlling the current in the stator windings, the torque and speed of the motor can be controlled. Servo motors are often used in conjunction with dedicated servo drives to precisely control the motor's movement through a feedback control system.

This report studies the global Permanent Magnet AC Servo Motor production, demand, key manufacturers, and key regions.
