## Abstracts

According to our (Global Info Research) latest study, the global Permanent Magnet Iron Removal Filter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The permanent magnet iron removal filter has a long cylindrical structure with an external permanent magnet, which can easily enter and exit the cylinder through a pneumatic mechanism. Several filters composed of magnetophilic metal fibers are arranged in the magnetic field area inside the rectangular cylinder. During operation, the magnet magnetizes the filter element in the magnetic field area, so that the magnetic particles in the liquid to be filtered are adsorbed on the surface or inside of the filter element. When the filter element captures a certain amount of magnetic impurities, the filtration capacity will decrease.
