Permit to work (PTW) software enables organizations to digitally manage and control high-risk work activities through the issuance, tracking, and closure of work permits. It provides a formalized system to authorize work processes that pose safety, health, or environmental risks, such as maintenance, hot work, confined space entry, electrical isolation, or working at height. PTW software ensures that necessary safety procedures, risk assessments, and approvals are completed before work begins. PTW systems are predominantly used in heavy industries with complex operational risks, including oil and gas, manufacturing, construction, mining, utilities, chemicals, etc. They are often part of a broader suite of environmental health and safety software, but can also exist as a specialized standalone product.
