## Abstracts

Laser equipment is mainly used for P1, P2, P3 laser scribing and P4 laser edge cleaning in perovskite preparation. 1) Laser scribing: During the preparation process of perovskite modules, the purpose of laser scribing P1, P2, and P3 is to divide the perovskite battery into multiple sub-cells. The metal electrode of the previous battery is different from the metal electrode of the subsequent battery. ITO is connected to form a series battery, thereby increasing the voltage; 2) Laser edge cleaning: There are differences in the various levels of printing or coating during the production of perovskite cells. Use laser etching to clean out an area of 1-10mm on the edge to ensure Consistency at all levels.
