Perovskite precursors refer to raw materials or intermediates used to prepare perovskite materials. Perovskite materials have a unique crystal structure, usually ABX₃ type, where A is a larger cation, B is a metal cation, and X is an anion. Perovskite precursors usually refer to compounds or ions that can be converted into perovskite structures. These precursors can be deposited on a substrate through specific chemical processes in solution, such as spin coating, solution processing, etc., and eventually form a perovskite layer.
