Abstracts

According to our (Global Info Research) latest study, the global Peroxycarboxylic Acid market size was valued at US\$ 1361 million in 2025 and is forecast to a readjusted size of US\$ 1891 million by 2032 with a CAGR of 4.8% during review period.

Peroxycarboxylic Acid is a class of organic peroxides with the general structure $R-COOOH$, formed by replacing the hydroxyl group ($-OH$) of a carboxylic acid with a peroxy group ($-OOH$); it is a highly reactive oxidizing agent widely used for disinfection, bleaching, epoxidation, and chemical synthesis. The supply chain begins upstream with key raw materials such as carboxylic acids (e.g., acetic acid), hydrogen peroxide, and acid catalysts (e.g., sulfuric acid), which are typically produced by petrochemical and chemical manufacturers. In the midstream, peroxycarboxylic acids are synthesized via equilibrium reactions between hydrogen peroxide and the corresponding carboxylic acids, often under controlled temperature and stabilization conditions due to their instability and safety risks. The products are then formulated into stabilized solutions or blends (e.g., peracetic acid solutions) and packaged using corrosion-resistant materials. Downstream, they are distributed through chemical suppliers and specialty distributors to end users across industries such as water treatment, food processing sanitation, healthcare sterilization, pulp & paper bleaching, and fine chemical synthesis, where their strong oxidizing and antimicrobial properties are essential. In 2025, global Peroxycarboxylic Acid output was about 1.0 million tons with 1.4 million tons of capacity, average prices of USD 1,200-2,200 per ton, and gross margins around 24%.
