Abstracts

According to our (Global Info Research) latest study, the global Peroxydicarbonate Initiators market size was valued at US$ 119 million in 2025 and is forecast to a readjusted size of US$ 153 million by 2032 with a CAGR of 3.7% during review period.

Peroxydicarbonate initiators constitute a category of organic peroxide initiators characterized by high activity at low temperatures. Structurally, they are free-radical initiators containing a peroxydicarbonate linkage; representative products include EHP, SBP, and BCHPC. These initiators primarily decompose to generate free radicals within a polymerization temperature range of approximately 40?70?C, and are utilized in the polymerization or copolymerization of monomers such as vinyl chloride, vinylidene chloride, and ethylene.

The upstream supply chain primarily comprises materials such as hydrogen peroxide, chloroformates or carbonate intermediates, corresponding alcohol feedstocks, and caustic alkalis; key product differentiation among the various offerings stems primarily from the specific structure of the alcohol moiety. Midstream manufacturers employ processes involving low-temperature controlled reactions, washing and refining, dilution and emulsification, stabilization, and low-temperature packaging to produce finished products in the form of liquids, emulsions, oil solutions, or powders. Downstream applications are predominantly found in the production of PVC, PVDC, LDPE, acrylic resins, and similar materials.

In 2025, global sales volume is projected to reach approximately 16,000 tons, with an average market price of approximately $7,200 per ton; leading manufacturers are expected to maintain gross margins within the range of 25% to 38%.
