Abstracts

According to our (Global Info Research) latest study, the global Peroxymonosulfuric Acid market size was valued at US\$ 184 million in 2025 and is forecast to a readjusted size of US\$ 250 million by 2032 with a CAGR of 4.5% during review period.

Peroxymonosulfuric Acid is a highly reactive inorganic peroxide acid with the formula H_2SO_5 , widely used as a strong oxidizing agent in chemical synthesis, water treatment, electronics cleaning, and disinfection. Industrially, it is typically produced on-site or in controlled environments by reacting concentrated sulfuric acid (H_2SO_4) with hydrogen peroxide (H_2O_2), due to its instability and tendency to decompose explosively if improperly handled or stored. The supply chain therefore begins with upstream bulk chemicals—primarily sulfur (for sulfuric acid production via the contact process) and hydrogen peroxide (produced via the anthraquinone process)—followed by midstream formulation or in-situ generation systems by specialty chemical companies and water treatment solution providers. Because of its hazardous nature and short shelf life, Peroxymonosulfuric Acid is rarely transported over long distances; instead, it is often generated at the point of use or supplied as stabilized solutions or precursor systems (e.g., mixtures that form the acid upon activation). Downstream, it is utilized in sectors such as pulp & paper bleaching, semiconductor and PCB cleaning, wastewater treatment, and advanced oxidation processes, where high oxidation potential and residue-free decomposition (to sulfuric acid and oxygen) are critical advantages. In 2025, global Peroxymonosulfuric Acid output was about 170,000 tons with 210,000 tons of capacity, average prices of USD 900–1,600 per ton, and gross margins around 22%.
