Abstracts

According to our (Global Info Research) latest study, the global Peroxyneodecanoate Initiators market size was valued at US$ 93.94 million in 2025 and is forecast to a readjusted size of US$ 121 million by 2032 with a CAGR of 3.7% during review period.

Peroxyneodecanoate initiators constitute a class of typical low-temperature organic peroxide free-radical initiators. The chemical structure of these compounds features both a peroxide bond (-O-O-) and a neodecanoate group; owing to the extreme ease with which the peroxide bond cleaves at relatively low temperatures to generate free radicals, they are widely utilized in the highly efficient polymerization of various monomers.

Upstream raw materials primarily include neodecanoic acid (or its acid chloride), tert-butyl alcohol (or cumyl alcohol), hydrogen peroxide, liquid caustic soda, acid chlorination reagents, solvents, stabilizers, and similar substances. In the midstream sector, these materials are processed?via esterification, peroxidation, low-temperature separation, dilution and stabilization, and safety packaging?into liquid or solution-based initiators. Downstream applications are predominantly found in PVC suspension polymerization, high-pressure polymerization of LDPE and EVA, and acrylate polymerization.

In 2025, global sales volume is projected to reach approximately 11,000 tons, with an average market price of approximately US$8,300 per ton; the gross profit margins for major manufacturers are expected to range between 28% and 40%.

This report is a detailed and comprehensive analysis for global Peroxyneodecanoate
