According to our (Global Info Research) latest study, the global Personal Care and Daily Chemical Testing market size was valued at US\$ 3789 million in 2025 and is forecast to a readjusted size of US\$ 5864 million by 2032 with a CAGR of 6.3% during review period.

Personal care and daily chemical product testing refers to technical services involving the systematic assessment of quality, safety, and efficacy for everyday chemical products used for personal cleansing, care, and grooming, as well as household cleaning (such as shampoos, body washes, skincare products, toothpaste, laundry detergents, disinfectants, etc.).

Driven by the sustained growth in global consumption of personal care and daily chemical products?coupled with rising consumer focus on safety, efficacy, and environmental sustainability?the testing market for these sectors continues to expand steadily. Regulatory bodies worldwide are continuously refining regulations for cosmetics and household chemical products, imposing stricter requirements regarding safety assessments, microbial control, testing for prohibited or restricted substances, labeling compliance, and efficacy claims; this has prompted brands and manufacturers to increase their investment in testing. Meanwhile, the rapid growth of segments such as efficacy-focused skincare, natural plant-based formulations, sensitive skin care, eco-friendly cleaning products, and cross-border e-commerce has fueled a rising demand for human efficacy evaluations, stability testing, packaging compatibility testing, and regulatory compliance testing. In addition, the application of new technologies such as in vitro replacement testing, three-dimensional skin models, high-resolution instrument analysis, AI image recognition, and digital laboratories has further improved testing

efficiency, accuracy, and standardization, driving the personal care and daily chemical testing industry toward professionalization, intelligence, and internationalization.
