Abstracts

Personal cooling devices are useful for dealing with heat stress, headaches, and heat related irritability among others. Hot weather can prove to be tiresome and due to this families resort to the purchase of expensive and high tonnage air conditioners. Families falling in the low to middle income group resort to the purchase of coolers which are far less effective as compared to air conditioners, but are capable of maintaining a cool temperature. However, with the rising cost of electricity, families find it difficult in maintaining such expensive air conditioners and they are looking for alternative ways to keep themselves cool during summer without having to spend a fortune on electricity to run air conditioners. Due to this factor, consumers are showing increased preference towards personal cooling devices to tackle the heat during summer.

Scope of the Report:

This report focuses on the Personal Cooling Devices in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The handheld cooling devices are expected to hold the largest market share and dominate the personal cooling device market during the forecast period.

The market for handheld cooling device in APAC is expected to grow at the highest CAGR during the forecast period. The countries such as China, Japan, Australia, South-Korea, and India in APAC region consumes more personal cooling devices as compared to other region in the world.
