Perspirometer is a specialized testing device used to evaluate the fading and staining properties of textiles, leather, footwear materials, and other materials under artificial perspiration. It primarily simulates the human perspiration environment by specifying perspiration, pressure, temperature, and time conditions to detect color changes in samples and staining of lining fabrics. This equipment is a commonly used basic quality testing instrument in the textile, apparel, home textile, footwear, leather, and dyeing and finishing industries, mainly serving product quality control, export inspection, brand inspection, and standard compliance evaluation. In 2025, the global production of Perspirometer reached 25,300 units, with a global average price of US\$453 per unit, and the gross profit margin of major companies in the industry was approximately 25%-40%.
