According to our (Global Info Research) latest study, the global Peruvian Carob(Tara Gum) market size was valued at US\$ 24.9 million in 2024 and is forecast to a readjusted size of USD 29.8 million by 2031 with a CAGR of 2.6% during review period.

Tara gum, also known as Peruvian carob. It is a food additive tara gum obtained from a shrub in Peru, using the endosperm of the seeds of *C. aesculapias* of the leguminous family as raw material, and processed through grinding. The processing method is similar to other bean gums. As a food additive thickener, tara gum can be used in frozen foods, meat products, baked foods and other foods.

The driving force for the development of Peruvian Carob may come from the following aspects:

Growth of food additive market: As people's demand for food additives continues to increase, the demand for peruvian carob as a thickener, stabilizer and emulsifier in the food additive market is also growing.

Functionality of peruvian carob: peruvian carob has properties such as enhancing the viscosity of gels and food stability, and being used as stabilizers and emulsifiers. Therefore, it is widely used in many foods, such as frozen foods, meat products, baked foods, etc. .

Superior properties of peruvian carob: Compared with guar gum, peruvian carob has superior properties such as cold water swelling and viscosity similar to guar gum in aqueous solution, so it can replace guar gum in some application fields.

The synergy of peruvian carob: peruvian carob has good synergy with tara bean gum, carrageenan, xanthan gum, agar, modified starch, CMC, etc., and can work together in food to improve the taste and stability of food.
