According to our (Global Info Research) latest study, the global Pervious Pavement market size was valued at USD 12880 million in 2023 and is forecast to a readjusted size of USD 15900 million by 2030 with a CAGR of 3.1% during review period.

Pervious Pavement is a specific type of pavement with a high porosity that allows rainwater to pass through it into the ground below. Pervious pavement is made of either pervious asphalt or pervious concrete. Both materials resemble conventional asphalt and concrete, but have more air spaces that allow water to pass through the pavement into a reservoir base of crushed aggregate, then infiltrate into the ground. Pervious pavement is designed to accept precipitation only and is typically thicker than traditional concrete to support the same loads. This report focuses on the Pervious Pavement materials.

The Global Info Research report includes an overview of the development of the Pervious Pavement industry chain, the market status of Municipal Infrastructure (Pervious Concrete, Porous Asphalt), Commercial Infrastructure (Pervious Concrete, Porous Asphalt), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Pervious Pavement.
