Pest Color-attracting Monitoring and Early Warning System is a plant protection monitoring device that utilizes the tropism of pests towards specific colors and sex pheromones to trap, count, and issue early warnings about pest occurrences in farmland, orchards, or forest areas. This equipment attracts target pests into the trapping device using colored boards or sex pheromones, and records and analyzes the number of pests trapped and changes over time using manual or automated methods to determine the intensity, stage, and trend of pest outbreaks. With the application of the Internet of Things and image recognition technology, pest color-attracting monitoring equipment is gradually upgrading towards automatic identification, remote transmission, and intelligent early warning, becoming an important basic tool in pest monitoring and green control systems. In 2025, sales reached 34,000 units, with an average price of \$3,200, a capacity utilization rate of 90%, and a gross profit margin of 40%.
