Peste des petits ruminants is an acute infectious disease that mainly occurs in small ruminants. Peste des petits ruminants is also the most troublesome disease for all sheep farmers. The incubation period of Peste des petits ruminants is generally about one week, and the longest will not exceed three weeks. If it is acute after the onset, the body temperature will rise rapidly to 40 degrees and last for about 4 days. The sick sheep are irritable, their hair is dull, their drinking water increases, and their appetite decreases. A foul-smelling thick liquid flows out of the nostrils. In severe cases, the mortality rate can reach 100%. Peste des petits ruminants vaccine is a milky white or light yellow spongy loose mass, which is easy to separate from the bottle wall and dissolves quickly after adding diluent.
