The global Pet Biopsy Services market size is expected to reach \$ 628 million by 2032, rising at a market growth of 7.6% CAGR during the forecast period (2026-2032).

Pet biopsy services refer to veterinary diagnostic services that provide companion animals with tissue or cell samples for pathological analysis in laboratories. Through microscopic examination, histological evaluation, and pathological reports, veterinarians can identify disease states such as tumors, inflammation, and autoimmune reactions, providing a scientific basis for clinical decision-making, treatment planning, and prognosis. This service is a crucial component of precision diagnosis in modern veterinary medicine, particularly valuable in tumor screening and complex disease assessment.

With the continued growth of the global pet population, the increasing trend towards more humane pet care, and pet owners' rising expectations for high-quality medical care, the demand for pet biopsy services, as a core component of pet health checks and disease diagnosis, is steadily increasing. Especially for the diagnosis and classification of complex conditions such as tumors, chronic diseases, and immune disorders, biopsies provide more precise information. Furthermore, advancements in technologies such as digital pathology, molecular diagnostics, and AI-assisted pathological analysis are further improving efficiency and accuracy in this field, driving the overall development of veterinary diagnostic services to a higher level.
