According to our (Global Info Research) latest study, the global Pet Cancer Early Screening Service market size was valued at US\$ 653 million in 2025 and is forecast to a readjusted size of US\$ 1056 million by 2032 with a CAGR of 7.1% during review period.

Pet Cancer Early Screening Service refers to a cancer risk assessment and early screening service for companion animals such as dogs and cats. It typically uses blood, urine, cytology samples, or other biological specimens to detect tumor-related biomarkers, nucleosome signals, circulating cell-free DNA, genetic mutations, epigenetic features, or abnormal cellular morphology, thereby helping assess potential cancer risk in pets. The service is commonly used in annual wellness checkups for senior pets, screening of high-risk breeds, adjunctive diagnosis for suspicious clinical signs, and post-treatment recurrence monitoring. It does not fully replace imaging, histopathology, or clinical diagnosis, but serves as an important front-end tool for early cancer detection and pet health management. The price of Pet Cancer Early Screening Services varies significantly, with basic blood- or urine-based screening typically priced at around USD 100?300 per test, while higher-end liquid biopsy, genomic, or epigenomic testing usually costs around USD 500?1,000 per test.

The upstream supply chain of Pet Cancer Early Screening Service includes antibodies, enzymes, primers and probes, sequencing reagents, sample collection tubes, preservation solutions, diagnostic kits, testing instruments, automated analysis platforms, AI pathology algorithms, and bioinformatics systems. Core reagents and analytical models directly influence test sensitivity, specificity, and result interpretation. Midstream participants mainly include veterinary diagnostic laboratories, pet molecular

diagnostics companies, liquid biopsy developers, digital pathology platforms, and large pet healthcare groups, which are responsible for assay development, sample processing, laboratory testing, report generation, and clinical interpretation. Downstream users include veterinary hospitals, clinics, veterinary oncology centers, pet wellness providers, breeding institutions, and premium pet health management customers, with services delivered through clinic-based sample submission, in-clinic testing, at-home sample collection, or pet wellness packages.

The Pet Cancer Early Screening Service market is at an early growth stage, driven by the increasing sophistication and preventive orientation of pet healthcare. Demand is mainly supported by pet aging, rising owner awareness of health management, the growing burden of cancer in companion animals, and the upgrading of premium veterinary wellness packages. Compared with traditional pathology and imaging diagnostics, these services emphasize early screening, non-invasive or minimally invasive sampling, repeatable monitoring, and convenient delivery, giving them strong commercialization potential in senior pets, high-risk breeds, and post-treatment follow-up scenarios. Future competition will focus on test accuracy, clinical validation, veterinary channel coverage, report interpretability, price acceptance, and integration with imaging, pathology, and treatment services. Companies with strong brand trust and laboratory network advantages are more likely to achieve scalable growth.
