PET coated sheet is a film made of polyester (PET) material, which is coated with a layer of film or specially processed on its surface to improve its physical and chemical properties. It has excellent properties such as transparency, heat resistance, chemical corrosion resistance, and impact resistance, and is often used in packaging, electronics, construction, and decoration industries. In the packaging industry, PET coated sheet is widely used in protective packaging of food, medicine, cosmetics and other products, which can effectively extend the shelf life and improve the appearance of products. In the electronics industry, it is used as a touch screen protective film and display screen protective film, and is favored for its high transparency and scratch resistance. In addition, PET coated sheet can also be used in automotive window film, architectural window film and other fields, with functions such as UV resistance and heat insulation. The environmental protection of this material also makes it a recyclable green material, which meets the needs of modern sustainable development. Due to its good printability, PET coated sheet can also be used in the production of advertising and promotional materials, becoming a multifunctional and high-performance material.
