Pet disease diagnostic reagents are a type of testing tools designed specifically for pets to quickly identify pathogens or specific disease markers in pets. These reagents usually contain specific antibodies or nucleic acid probes, and use techniques such as immunochromatography, enzyme-linked immunosorbent assay (ELISA) or polymerase chain reaction (PCR) to detect pathogenic components in pet blood, urine or other body fluid samples. They provide pet owners and veterinarians with a fast and accurate means of disease diagnosis, which helps to formulate treatment strategies and preventive measures in a timely manner. The application of pet disease detection and diagnostic reagents has significantly improved the quality and efficiency of pet medical services.
